Problem Statement : Course Content Simplification Agent

The Challenge

Academic content often presents significant barriers to student learning:

- Complex jargon and technical terminology make study materials difficult to understand
- Students spend excessive time deciphering dense explanations and lengthy passages
- One-size-fits-all educational resources don't adapt to different learning levels (Beginner/Intermediate/Expert)
- Limited access to personalized explanations and simplified versions of course materials
- Students struggle to connect academic concepts to real-world applications

The Objective

Develop Atlas AI, an intelligent AI-powered Course Content Simplification Agent that transforms complex academic material into clear, understandable content tailored to individual learning levels.

The proposed solution aims to:

- Simplify complex course content while preserving technical accuracy
- Provide multi-level explanations (Beginner → Intermediate → Expert)
- Support multiple languages for broader accessibility (English, Hindi, Marathi, Tamil, Telugu, Bengali, Kannada)
- Generate jargon-busting definitions and real-world analogies for better comprehension
- Enable document-aware Q&A through Retrieval-Augmented Generation (RAG)
- Deliver personalized learning assistance at scale
